

To display the ships on the screen, we call `draw()` on the group, and Pygame draws each ship.

To show the player how many ships they have to start with, we call `prep_ships()` when a new game starts. We do this in `_check_play_button()` in `AlienInvasion`:

```
alien_invasion.py    def _check_play_button(self, mouse_pos):
                    --snip--
                    if button_clicked and not self.game_active:
                        --snip--
                        self.sb.prep_level()
                        self.sb.prep_ships()
                    --snip--
```

We also call `prep_ships()` when a ship is hit, to update the display of ship images when the player loses a ship:

```
alien_invasion.py    def _ship_hit(self):
                    """Respond to ship being hit by alien."""
                    if self.stats.ships_left > 0:
                        # Decrement ships_left, and update scoreboard.
                        self.stats.ships_left -= 1
                        self.sb.prep_ships()
                    --snip--
```

We call `prep_ships()` after decreasing the value of `ships_left`, so the correct number of remaining ships displays each time a ship is destroyed.

Figure 14-6 shows the complete scoring system, with the remaining ships displayed at the top left of the screen.
