

Chapter 10 shows you how to work with files and handle errors so your programs won't crash unexpectedly. You'll store data before your program closes and read the data back in when the program runs again. You'll learn about Python's exceptions, which allow you to anticipate errors and make your programs handle those errors gracefully.

In **Chapter 11** you'll learn to write tests for your code, to check that your programs work the way you intend them to. As a result, you'll be able to expand your programs without worrying about introducing new bugs. Testing your code is one of the first skills that will help you transition from beginner to intermediate programmer.
