## GETTING STARTED WITH DJANGO

As the internet has evolved, the line between websites and mobile apps has blurred.

Websites and apps both help users interact with data in a variety of ways. Fortunately, you can use Django to build a single project that serves a dynamic website as well as a set of mobile apps. *Django* is Python's most popular *web framework*, a set of tools designed for building interactive web applications. In this chapter, you'll learn how to use Django to build a project called Learning Log, an online journal system that lets you keep track of information you've learned about different topics.

We'll write a specification for this project, and then define models for the data the app will work with. We'll use Django's admin system to enter some initial data, and then write views and templates so Django can build the site's pages.

Django can respond to page requests and make it easier to read and write to a database, manage users, and much more. In Chapters 19 and 20,
