

To register `Topic` with the admin site, enter the following:

```
from django.contrib import admin

from .models import Topic

admin.site.register(Topic)
```

This code first imports the model we want to register, `Topic`. The dot in front of `models` tells Django to look for `models.py` in the same directory as `admin.py`. The code `admin.site.register()` tells Django to manage our model through the admin site.

Now use the superuser account to access the admin site. Go to `http://localhost:8000/admin/` and enter the username and password for the superuser you just created. You should see a screen similar to the one shown in Figure 18-2. This page allows you to add new users and groups, and change existing ones. You can also work with data related to the `Topic` model that we just defined.

Figure 18-2: The admin site with `Topic` included

NOTE

If you see a message in your browser that the web page is not available, make sure you still have the Django server running in a terminal window. If you don't, activate a virtual environment and reissue the command `python manage.py runserver`. If you're having trouble viewing your project at any point in the development process, closing any open terminals and reissuing the `runserver` command is a good first troubleshooting step.

Adding Topics

Now that `Topic` has been registered with the admin site, let's add our first topic. Click **Topics** to go to the Topics page, which is mostly empty, because we have no topics to manage yet. Click **Add Topic**, and a form for adding a new topic appears. Enter **Chess** in the first box and click **Save**. You'll be sent back to the Topics admin page, and you'll see the topic you just created.

Let's create a second topic so we'll have more data to work with. Click **Add Topic** again, and enter **Rock Climbing**. Click **Save**, and you'll be sent back to the main Topics page again. Now you'll see Chess and Rock Climbing listed.
