

In the main *ll_project* folder, open the file *urls.py*. You should see the following code:

```
ll_project/ ❶ from django.contrib import admin
urls.py      from django.urls import path

              ❷ urlpatterns = [
              ❸ path('admin/', admin.site.urls),
              ]
```

The first two lines import the *admin* module and a function to build URL paths ❶. The body of the file defines the *urlpatterns* variable ❷. In this *urls.py* file, which defines URLs for the project as a whole, the *urlpatterns* variable includes sets of URLs from the apps in the project. The list includes the module *admin.site.urls*, which defines all the URLs that can be requested from the admin site ❸.

We need to include the URLs for *learning_logs*, so add the following:

```
from django.contrib import admin
from django.urls import path, include

urlpatterns = [
    path('admin/', admin.site.urls),
    path('', include('learning_logs.urls')),
]
```

We've imported the *include()* function, and we've also added a line to include the module *learning_logs.urls*.

The default *urls.py* is in the *ll_project* folder; now we need to make a second *urls.py* file in the *learning_logs* folder. Create a new Python file, save it as *urls.py* in *learning_logs*, and enter this code into it:

```
learning_logs/ ❶ """Defines URL patterns for learning_logs."""
urls.py        ❷ from django.urls import path

              ❸ from . import views

              ❹ app_name = 'learning_logs'
              ❺ urlpatterns = [
                  # Home page
              ❻ path('', views.index, name='index'),
              ]
```

To make it clear which *urls.py* we're working in, we add a docstring at the beginning of the file ❶. We then import the *path* function, which is needed when mapping URLs to views ❷. We also import the *views* module ❸; the dot tells Python to import the *views.py* module from the same directory as the current *urls.py* module. The variable *app_name* helps Django distinguish this *urls.py* file from files of the same name in other apps within the project ❹. The variable *urlpatterns* in this module is a list of individual pages that can be requested from the *learning_logs* app ❺.
