

Django to generate a link matching the URL pattern with the name 'topics' in *learning_logs/urls.py*.

Now when you refresh the home page in your browser, you'll see a Topics link. When you click the link, you'll see a page that looks similar to Figure 18-4.

Figure 18-4: The topics page

Individual Topic Pages

Next, we need to create a page that can focus on a single topic, showing the topic name and all the entries for that topic. We'll define a new URL pattern, write a view, and create a template. We'll also modify the topics page so each item in the bulleted list links to its corresponding topic page.

The Topic URL Pattern

The URL pattern for the topic page is a little different from the prior URL patterns because it will use the topic's *id* attribute to indicate which topic was requested. For example, if the user wants to see the detail page for the Chess topic (where the *id* is 1), the URL will be *http://localhost:8000/topics/1/*. Here's a pattern to match this URL, which you should place in *learning_logs/urls.py*:

```
learning_logs/urls.py  --snip--
                        urlpatterns = [
                        --snip--
                        # Detail page for a single topic.
                        path('topics/<int:topic_id>/', views.topic, name='topic'),
                        ]
```

Let's examine the string 'topics/<int:topic_id>/' in this URL pattern. The first part of the string tells Django to look for URLs that have the word *topics* after the base URL. The second part of the string, /<int:topic_id>/, matches an integer between two forward slashes and assigns the integer value to an argument called *topic_id*.
