

```

❸    <div>
        {% block content %}{% endblock content %}
    </div>
</main>

</body>
</html>

```

We first open a `<main>` tag ❶. The *main* element is used for the most significant part of the body of a page. Here we assign the bootstrap selector container, which is a simple way to group elements on a page. We'll place two div elements in this container.

The first div element contains a `page_header` block ❷. We'll use this block to title most pages. To make this section stand out from the rest of the page, we place some padding below the header. *Padding* refers to space between an element's content and its border. The selector `pb-2` is a bootstrap directive that provides a moderate amount of padding at the bottom of the styled element. A *margin* is the space between an element's border and other elements on the page. The selector `mb-2` provides a moderate amount of margin at the bottom of this div. We want a border on the bottom of this block, so we use the selector `border-bottom`, which provides a thin border at the bottom of the `page_header` block.

We then define one more div element that contains the block content ❸. We don't apply any specific style to this block, so we can style the content of any page as we see fit for that page. The end of the *base.html* file has closing tags for the `main`, `body`, and `html` elements.

When you load Learning Log's home page in a browser, you should see a professional-looking navigation bar that matches the one shown in Figure 20-1. Try resizing the window so it's really narrow; a button should replace the navigation bar. Click the button, and all the links should appear in a drop-down list.

Styling the Home Page Using a Jumbotron

To update the home page, we'll use a Bootstrap element called a *jumbotron*, a large box that stands out from the rest of the page. Typically, it's used on home pages to hold a brief description of the overall project and a call to action that invites the viewer to get involved.

Here's the revised *index.html* file:

```

index.html    {% extends "learning_logs/base.html" %}

❶ {% block page_header %}
❷    <div class="p-3 mb-4 bg-light border rounded-3">
        <div class="container-fluid py-4">
❸            <h1 class="display-3">Track your learning.</h1>

❹            <p class="lead">Make your own Learning Log, and keep a list of the
                topics you're learning about. Whenever you learn something new
                about a topic, make an entry summarizing what you've learned.</p>

```
