

```

❺      <a class="btn btn-primary btn-lg mt-1"
        href="{% url 'accounts:register' %}">Register &raquo;</a>
    </div>
</div>
{% endblock page_header %}

```

We first tell Django that we're about to define what goes in the `page_header` block ❺. A jumbotron is implemented as a pair of `div` elements with a set of styling directives applied to them ❷. The outer `div` has padding and margin settings, a light background color, and rounded corners. The inner `div` is a container that changes along with the window size and has some padding as well. The `py-4` selector adds padding to the top and bottom of the `div` element. Feel free to adjust the numbers in these settings and see how the home page changes.

Inside the jumbotron are three elements. The first is a short message, Track your learning, that gives new visitors a sense of what Learning Log does ❸. The `<h1>` element is a first-level header, and the `display-3` selector adds a thinner and taller look to this particular header. We also include a longer message that provides more information about what the user can do with their learning log ❹. This is formatted as a lead paragraph, which is meant to stand out from regular paragraphs.

Rather than just using a text link, we create a button that invites users to register an account on Learning Log ❺. This is the same link as in the header, but the button stands out on the page and shows the viewer what they need to do in order to start using the project. The selectors you see here style this as a large button that represents a call to action. The code `»` is an *HTML entity* that looks like two right angle brackets combined (`>>`). Finally, we provide closing `div` tags and close the `page_header` block. With only two `div` elements in this file, it's not particularly helpful to label the closing `div` tags. We aren't adding anything else to this page, so we don't need to define the content block in this template.

The home page now looks like Figure 20-1. This is a significant improvement over the unstyled version of the project!

Styling the Login Page

We've refined the overall appearance of the login page, but the login form itself doesn't have any styling yet. Let's make the form look consistent with the rest of the page by modifying *login.html*:

```

login.html  {% extends 'learning_logs/base.html' %}
❶ {% load django_bootstrap5 %}

❷ {% block page_header %}
    <h2>Log in to your account.</h2>
{% endblock page_header %}

{% block content %}

```
