

2

VARIABLES AND SIMPLE DATA TYPES

In this chapter you'll learn about the different kinds of data you can work with in your Python programs. You'll also learn how to use variables to represent data in your programs.

What Really Happens When You Run `hello_world.py`

Let's take a closer look at what Python does when you run `hello_world.py`. As it turns out, Python does a fair amount of work, even when it runs a simple program:

```
hello_world.py print("Hello Python world!")
```

When you run this code, you should see the following output:

```
Hello Python world!
```
