

Correspondence in twoers

By C.G.S.Narayanan

Correspondence between white and black can be seen in many simple themes like half-in and Grimshaw and half-battery. British composer Colin Sydenham whose researches into correspondence led to articles in The Problemist and also the production of a number of very interesting problems(three of them from John Rice's 'Chess Wizardry the new ABC of chess problems' are presented in this article).In the first problem below there is a set cutting-point between the lines of a black rook and a black bishop on b5, with the resulting potential for mates on c4 and c5 after 1...Rb5 and 1..Bb5.However,in the diagram position no mates are available on these squares. The WNd4 stands initially on the cutting-point of two white lines, those of the Re4 and the Be3.The **key 1.Rb5!** switches the WN from the white cutting point to the black one and, by guarding the set flight c3,it threatens 2.Qc5 as well as 2.Qxc4.These mates are separately forced by 1...d6 and 1,,,d5.

C.P.Sydenham

1 Pr,British Chess Magazine 1979

Mate in two moves

Set: 1...Kc3 2.Bd2

Key 1.Nb5!(2.Qc5/Qxc4)

1...Rxb5 2.Rxc4;1...Bxb5 2.Bc5

1...Kxb5 2.Qb6

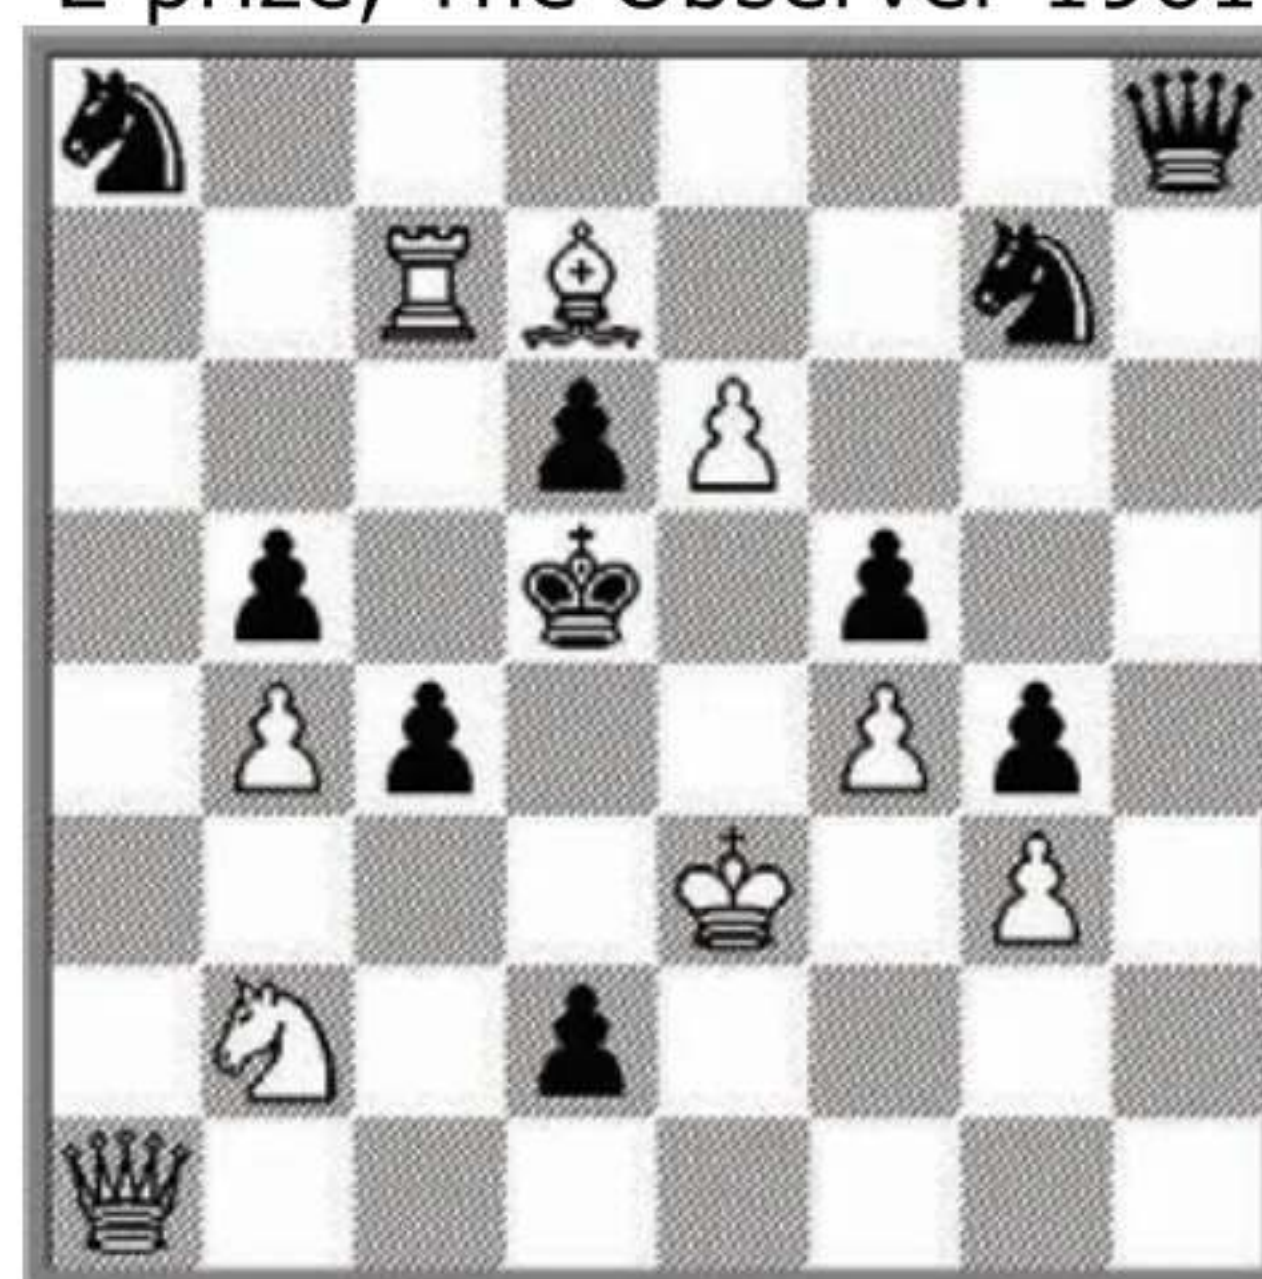

The rook-capture leads to rook mate and the bishop-capture leads to

bishop mate. Another interesting line effect occurs when the black king captures b5.Two further black lines are opened to guard c5 and c4 so that WQ cannot mate on these squares and must play Qb6 instead.

In the second problem white has three tries by white knight which are parried by equivalent moves by the black knight.Try 1.Na4? (2.Qd4) 1.Nd1? Nh5! 1.Nxc4? Nxe6! **Key 1.Rxc4!**1...Ne8 2.Qxa8;1..Nh5 2.Qh1 1...Nxe6 2.Bc6;1...bxc4 2.Qa5

2 prize, The Observer 1961

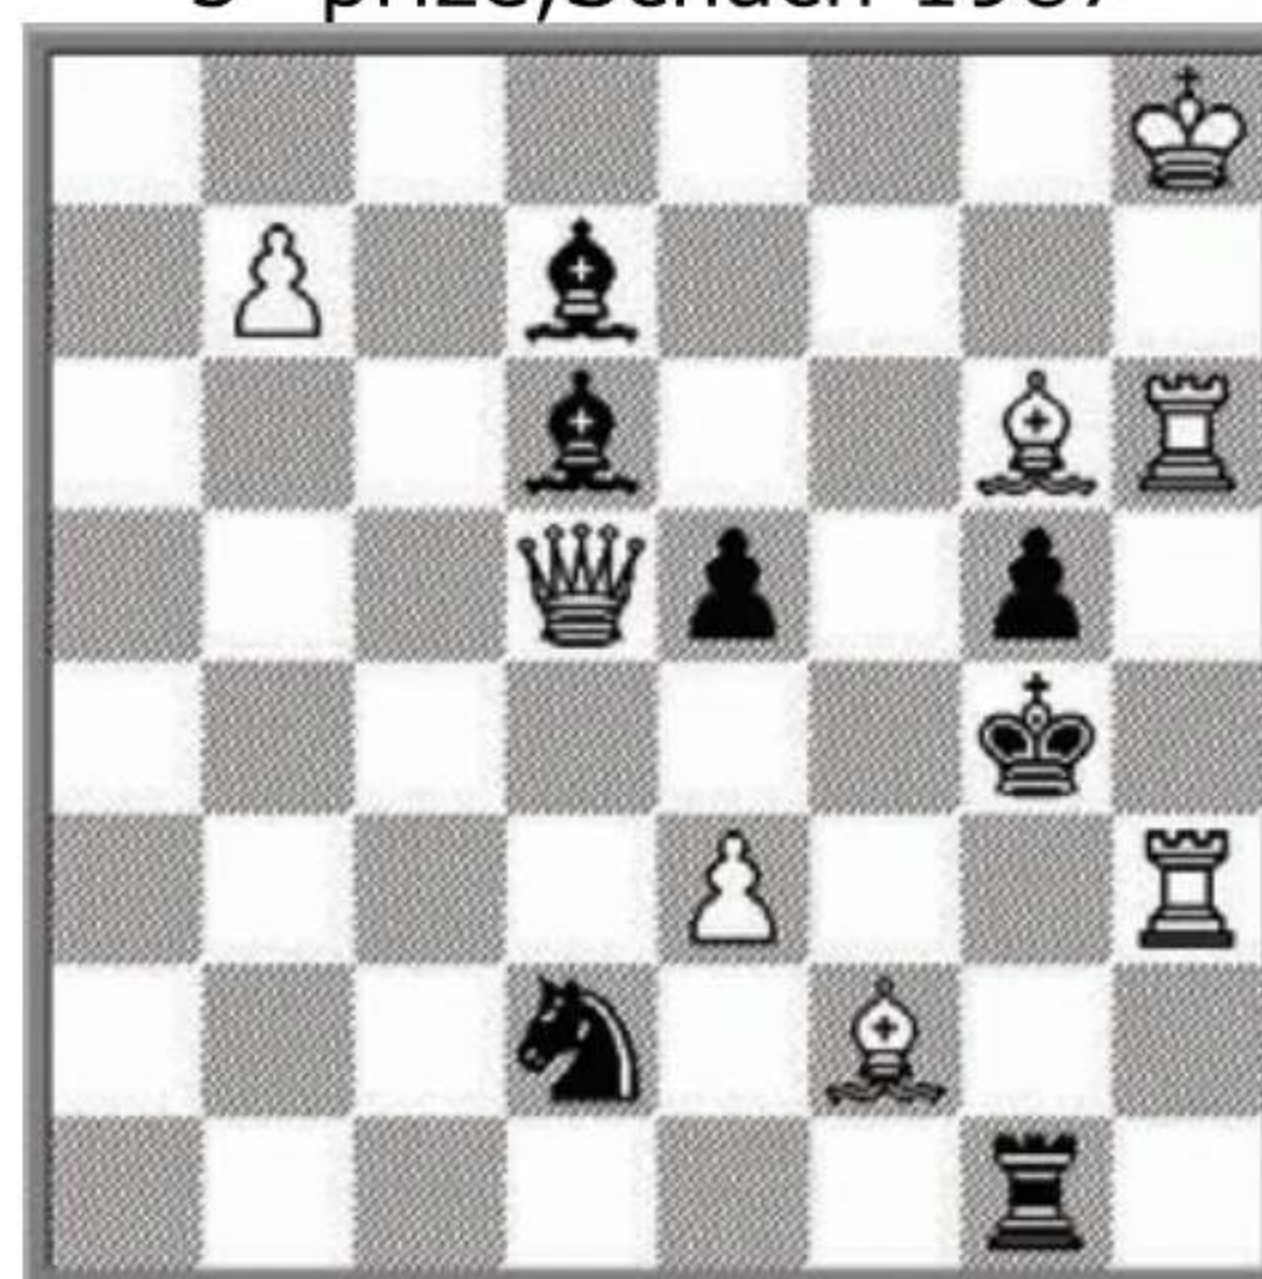

Mate in two moves

Correspondence-diagonal/orthogonal can be seen in the problem for solving below where the two rooks moving the same number of squares in opposite direction.

M.Tribowski

5th prize,Schach 1987

Mate in two moves

Solution to problem for solving in the article 'half-pin in combination':**Key 1.Qg3!** (threat:2.Se3) Qg6;1...Sd3 2.Qg4;1...Re4 2.Rf8 1...Ke4 2.Sd6
