

Using addition, subtraction, or multiplication with integers returns an integer:

```
>>> 2 + 3
5
>>> 3 - 2
1
>>> 2 * 3
6
```

Using addition, subtraction, or multiplication with at least one float returns a float. All division operations return floats:

```
>>> 2.0 + 3
5.0
>>> 3.0 - 2
1.0
>>> 2.0 * 3
6.0
>>> 10 / 5
2.0
```

Two asterisks (**) represent an exponent. To raise 2 to the power of 3, enter:

```
>>> 2 ** 3
8
```

Use parentheses to force a nonstandard order of operations:

```
>>> (2 + 3) * 4
20
```
