

```

    } else {
        // RECURSIVE CASE
        solve(numberOfDisks - 1, startTower, tempTower, endTo
wer); ❹
        moveOneDisk(startTower, endTower); ❺
        printTowers();
        solve(numberOfDisks - 1, tempTower, endTower, startTo
wer); ❻
        return;
    }
}

// Solve:
document.write("<pre>");
printTowers();
solve(TOTAL_DISKS, "A", "B", "C");
document.write("</pre>");
</script>

```

When you run this code, the output shows each move of the disks until the entire tower has moved from Tower A to Tower B:
