

```

for i in range(3):
    # Record the starting position and heading.
    curveStartingPosition = turtle.position()
    curveStartingHeading = turtle.heading()
    drawKochCurve(curveStartingPosition,
                  curveStartingHeading, length)

    # Move back to the start position for this side.
    turtle.penup()
    turtle.goto(curveStartingPosition)
    turtle.setheading(curveStartingHeading)

    # Move to the start position of the next side.
    turtle.forward(length)
    turtle.right(120)

drawKochSnowflake((100, 500), 0, 500)
turtle.exitonclick()

```

The Koch snowflake is also sometimes called the *Koch island*. Its coastline would be literally infinitely long. While the Koch snowflake fits into the finite area of a page of this book, the length of its perimeter is infinite, proving that, while it seems counterintuitive, the finite can contain the infinite!
