

```

# Move the mark to an unvisited neighboring space:

if nextIntersection == NORTH:
    nextX = x
    nextY = y - 2
    maze[(x, y - 1)] = EMPTY # Connecting hallway.
elif nextIntersection == SOUTH:
    nextX = x
    nextY = y + 2
    maze[(x, y + 1)] = EMPTY # Connecting hallway.
elif nextIntersection == WEST:
    nextX = x - 2
    nextY = y
    maze[(x - 1, y)] = EMPTY # Connecting hallway.
elif nextIntersection == EAST:
    nextX = x + 2
    nextY = y
    maze[(x + 1, y)] = EMPTY # Connecting hallway.

hasVisited.append((nextX, nextY)) # Mark space as visited.
visit(nextX, nextY) # Recursively visit this space.

```

The JavaScript code continues as follows:

JavaScript

```

} else {
    // RECURSIVE CASE
    // Randomly pick an unvisited neighbor to visit:
    let nextIntersection = unvisitedNeighbors[
    Math.floor(Math.random() * unvisitedNeighbors.length)];

    // Move the mark to an unvisited neighboring space:
    let nextX, nextY;
    if (nextIntersection === NORTH) {
        nextX = x;
        nextY = y - 2;
        maze[[x, y - 1]] = EMPTY; // Connecting hallway.
    } else if (nextIntersection === SOUTH) {
        nextX = x;
        nextY = y + 2;
        maze[[x, y + 1]] = EMPTY; // Connecting hallway.
    } else if (nextIntersection === WEST) {

```
