
NOTE

Python uses the terms `list` and `item`, while JavaScript uses the terms `array` and `element`, but they are respectively identical for our purposes. In this book, I use the terms `list` and `item` for both languages.

For example, consider this *cardStack.py* program, which pushes and pops string values of playing cards to the end of a list named `cardStack`:

Python

```
cardStack = ❶ []
❷ cardStack.append('5 of diamonds')
print(', '.join(cardStack))
cardStack.append('3 of clubs')
print(', '.join(cardStack))
cardStack.append('ace of hearts')
print(', '.join(cardStack))
❸ cardStack.pop()
print(', '.join(cardStack))
```

The following *cardStack.html* program contains the equivalent code in JavaScript:

JavaScript

```
<script type="text/javascript">
let cardStack = ❶ [];
❷ cardStack.push("5 of diamonds");
document.write(cardStack + "<br />");
cardStack.push("3 of clubs");
document.write(cardStack + "<br />");
cardStack.push("ace of hearts");
document.write(cardStack + "<br />");
❸ cardStack.pop()
document.write(cardStack + "<br />");
</script>
```

When you run this code, the output looks like this:
