

Guided growth: RX Muralidhar’s quiet revolution stems from a coaching mantra that favours minimal interference and maximum understanding — letting players grow through trust, not control. NIGAMANTH P

yorkers turned heads, may soon find himself on a much bigger stage. Much of this quiet revolution can be traced back to Muralidhar’s coaching philosophy — minimal intervention, maximum insight. “Instead of spoon feeding the players, I observe them a lot. After a certain point, I identify their weaknesses and present them with challenges that target those areas in practice. I assess them based on how they tackle those,” he

explained. He closed with a nod to the game’s cognitive demands: “I believe that any time a bowler or a batter walks in, there is a task waiting for them. It could be anything; taking a wicket, building a partnership or containing runs. If he is able to figure this task by himself and attempts to solve it, he will be backed in the coming games. It all boils down to situational awareness regardless of your training.”
