

Now let's talk about food.

Kenny's chef isn't just a cook — he's an engineer of biology. Every plate is crafted for hormonal balance, digestive support, and immune resilience. Pineapple rinds for bromelain. Prunes for fibre. Broccoli and asparagus to manage testosterone pathways. Garlic for natural defence. Even bedtime snacks are evaluated for their impact on sleep cycles.

This leads us to a critical truth: Kenny's sleep is sacred. Ten-thirty to seven-thirty. No compromise. Magnesium before bed. Melatonin only when travelling. Ambient room setup, blackout curtains, and digital detox. If sleep is broken, performance is broken.

Still think 9.86 is luck?

Let me tell you what people don't see. Kenny logs his breathing patterns during training. He tracks his HRV. He fasts once a month on rest days to induce cellular renewal. He avoids gluten like it's poison. He monitors muscle stiffness with his physio. And he doesn't eat a single piece of food

without understanding its function.

In the off-season, he tested a vegetarian diet for five days. Why? To reduce inflammatory load and check his heart rate baseline. That's not an experiment — that's data gathering. It worked. His resting heart rate dipped. His energy stayed consistent.

And let's be honest. Kenny is not just an athlete. He's a machine of intent. He visualises his races. He journals his reactions. He adapts supplement timing based on sleep quality and soreness. He adds manuka honey and zinc carnosine when immune flags go up. He responds to his body like a scientist and performs like an artist.

People often ask me what makes an athlete elite. The answer isn't medals. It's awareness. It's ownership. It's the willingness to invest in your biology as much as your speed.

So, was 9.86 born from practice? Absolutely. Kenny trains with intensity you can feel in the air. His sprint mechanics, gym routines, and mobility drills are obsessive in detail.

Was it nutrition? Without question.

A perfect run: Kenneth Bednarek (centre) won the men's 100m race at the Grand Slam Track event in Philadelphia. GETTY IMAGES

The man eats to win. And every bite is aligned to purpose.

Was it luck? Not a chance. If there was luck, it was in the fortune of finding the right tribe. The right team. The right plan.

As I always tell Kenny, the podium isn't built on game day. It's built in your choices. The extra hour of sleep. The meal you packed instead of ordered. The recovery you respected instead of skipped.

That's where the real medals are made. When I watched him hit 9.86, I didn't just see speed. I saw every prune packed before a flight. Every stretch held 10 seconds longer. Every cold shower, magnesium dose, and food diary entry.

So, let's call it what it is.

Not practice. Not nutrition. Not luck. It's Kung Fu Kenny.

And it's deliberate excellence.
