

On problem economy

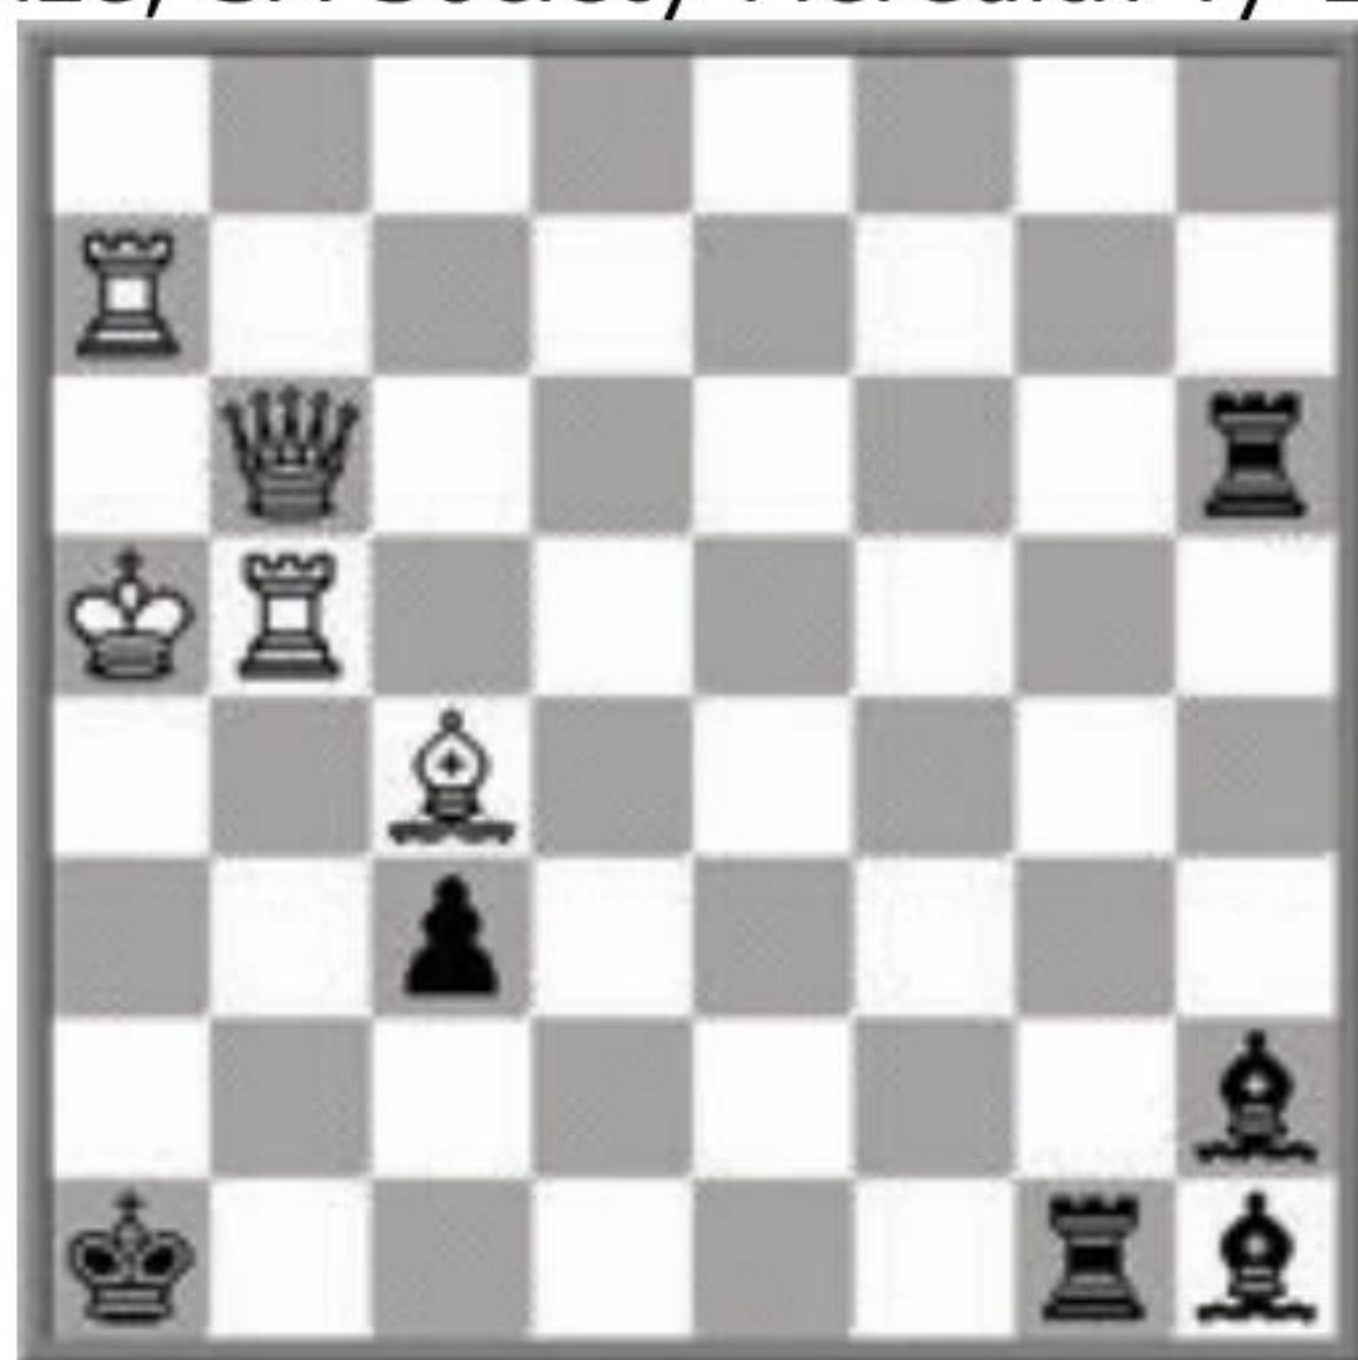

By C.G.S.Narayanan

Economy in chess composition does not necessarily mean the use of few men. It rather relates to the number of men used to the results obtained usually measured by the variety or complexity of the lines of play. A problem is said to be constructed uneconomically when the same results or effects could have been obtained with fewer or with less powerful men. The use of large number of men at times may be more economically constructed than a lightweight which cannot pull its own weight. The economy in the functioning of the white forces is normally given more stress than in the case of the more passive black force.

The first problem below follows economy norm such as economy of material (not using more pieces than necessary). It has more content also in a Meredith setting (problems with 8-12 pieces). It also satisfies 'economy of space' using the board to the fullest

G.F.Anderson

I prize, SA Society Meredith Ty 1946

Mate in two moves

Key 1.Ka6! (threat 2.Ra5)

1...Rg2 2.Rb1; 1...Bc6 2.Qa5

1...Bd6 2.Qxg1; 1...Rxb6+ 2.Kxb6

From the single phase traditional two-mover we move on to a

multiphase one, a zagoruyko, named after its inventor.

H.Hermanson

I prize BOE, 1953

Mate in two moves

Set 1...cRxe2 2.Qc1; 1...eRxe2 2.Qf4

Try 1.Nxb3? (2.Qc5)

1...cRxe2 2.bNd2; 1...eRe2 2.fNe5 but refuted by 1...Na4!

Key 1.cNd3 (2.Qc5)

1...cRxe2 2.Nxb2; 1..eRxe2 2.dNe5

The problem for solving (given below) is a unique triple Grimshaw using only three black men but with only five thematic mates

Kalyan Seetharaman

Northwest Chess 1977

Mate in two moves

Solution to problem for solving in the article 'On thematic blends' **Key 1.Qxb4!** (2.Bd4) 1...e3 2.Nf4; 1...Ke6 2.Qe7; 1...Nd6 2.Qxd6
