

$$\frac{6}{33} = \frac{1}{b + \frac{1}{c + \frac{1}{d + \frac{1}{e + \frac{1}{f + \frac{1}{g + \frac{1}{\dots}}}}}}}$$

If we take the reciprocal of both sides of this equation, we get the following equation:

$$\frac{33}{6} = b + \frac{1}{c + \frac{1}{d + \frac{1}{e + \frac{1}{f + \frac{1}{g + \frac{1}{h + \frac{1}{\dots}}}}}}}$$

Our task is now to find b and c . We can do a division again; 33 divided by 6 is 5, with remainder 3, so we can rewrite $33/6$ as $5 + 3/6$:

$$5 + \frac{3}{6} = b + \frac{1}{c + \frac{1}{d + \frac{1}{e + \frac{1}{f + \frac{1}{g + \frac{1}{h + \frac{1}{\dots}}}}}}}$$

We can see that both sides of the equation have an integer (5 and b) and a fraction ($3/6$ and the rest of the right side). We can conclude that the integer
