

- plotting trajectory of, [1–2](#), [4](#), [7](#)
- tangent calculation, [8–9](#)
- `ball_trajectory()` function, [3–4](#)
- baseball, scientific features of, [6](#)
- bell curve, [95–96](#)
- `between_spaces` variable, creating, [154](#)
- big O notation
  - sleep sort’s runtime, [72](#)
  - using, [64–65](#)
- billiard balls and randomness, [91](#)
- binary branching process, using with decision trees, [166–167](#)
- binary expansion, [17](#)
- binary search, [73–75](#)
- bisect, geometric terminology, [130](#)
- bits, string of, [97–98](#)
- board, drawing for dots and boxes game, [187–189](#)
- bootstrapping, [91](#)
- Bowyer-Watson algorithm, [136](#). *See also* DT (Delaunay triangulation); triangulation
- brain, “wetware” of, [5](#)
- branching process, using with decision trees, [166–167](#)
- brute force solution, using in TSP (traveling salesman problem), [107](#)
- Bush, Vannevar, [6](#)

## C

- calculus, rules of, [38](#)
- centroid of triangle, finding, [131–133](#)
