

- underfitting, [181–182](#)
- using nested lists with, [176](#)

Delaunay triangulation (DT). *See also* geometry

- generating, [136–139](#)
- implementing, [139–143](#)
- overview, [134–136](#)
- purpose of, [136](#)
- returning from points, [142](#)
- to Voronoi, [143–147](#)

derivative, calculating, [38](#)

Devlin, Keith, [5–6](#)

dictionary object, creating for chatbot, [203](#)

Diehard tests for randomness, [95–97](#)

divide and conquer algorithm, [69](#)

dogs, catching Frisbees, [6](#)

dots and boxes game. *See also* games

- drawing board for, [187–188](#)
- playing, [186–187](#)
- scoring, [190](#)

doubling column, RPM (Russian peasant multiplication), [14–20](#)

down_left, Kurushima’s algorithm, [28–29](#)

drawgame() function, using with games, [188–189](#)

drawing circles, [133](#)

drawlattice() function, using with games, [188–189](#)

DT (Delaunay triangulation). *See also* Bowyer-Watson algorithm; triangulation
