

fractions to radicals, [88](#). *See also* continued fractions

Franklin, Benjamin, [126](#)

Frisbee, trajectory vectors, [6](#)

functions

 inverting, [75](#)

 recursion, [22](#)

G

Galilean model, [2–5](#)

game trees. *See also* AI (artificial intelligence); decision trees; random forests

 building, [192–195](#)

 and winning games, [190–192](#)

games. *See also* dots and boxes game

 choosing moves, [195–198](#)

 minimax algorithm, [195–198](#)

 representing, [188–189](#)

 scoring, [189–190](#)

 winning, [195–198](#)

Gaussian normal curve, [96](#)

`gen_delaunay()` function, passing *x* and *y* values to, [143](#)

`generate_tree()` function, using with games, [194](#)

`genlines` function, using with triangles, [129](#)

`genlines` function, TSP (traveling salesman problem), [104](#)

geometry. *See also* DT (Delaunay triangulation)

 postmaster problem, [126–128](#)

 representing points, [128](#)
