

- tangent of angle, [8–9](#)
- terminology, [130](#)
- triangles, [128–134](#)
- `get_number()` function, using with continued fractions, [85](#)
- `get_prediction()` function, using with decision trees, [178–179](#)
- `get_split()` function, using with decision trees, [174–176](#)
- `get_splitpoint()` function, using with decision trees, [174](#)
- git bisect software, using for binary search, [75](#)
- global variables, defining for simulated annealing, [122](#)
- golden ratio, [78–79](#)
- gradient ascent, [35](#)
 - climbing income hill, [44–45](#)
 - implementing, [40–41](#)
 - local extrema, [42–44](#)
 - objections, [41–42](#)
 - using, [49](#)
- gradient descent, [35](#), [47](#)
- Gravity's Rainbow*, [3](#)
- greedy algorithms, TSP (traveling salesman problem), [112–113](#)
- guided search, using in TSP (traveling salesman problem), [112](#)

H

- `half_double` dataframe, RPM (Russian peasant multiplication), [18](#)
- halving column, RPM (Russian peasant multiplication), [14–20](#)
- happiness levels, calculating with decision trees, [170](#)
- hill climbing, [47–48](#)
