

k-means machine-learning method, [56](#)

k-NN machine-learning method, [56](#)

Kurushima's algorithm

function, [30–31](#)

rules, [25–28](#)

L

la pipopipette, [186–187](#)

language algorithms

difficulty, [150](#)

phrase completion, [159–163](#)

space insertion, [150–158](#)

lattice, using with la pipopipette, [186–187](#)

LCGs (linear congruential generators), [92–93](#)

`left` and `right` variables, Python, [66](#)

Leibniz, Gottfried Wilhelm, [130–131](#)

LFSRs (linear feedback shift registers), [97–99](#)

lifetime income and education, [42–45](#)

lines of sight, plotting for thrown ball, [7–8](#)

list comprehensions, [149](#), [156](#)

list indexing syntax, Python, [68–69](#)

lists, sorting, [153](#)

`loc` functionality, RPM (Russian peasant multiplication), [19](#)

local extrema, problem, [42–45](#)

loops, RPM (Russian peasant multiplication), [18](#)

lower bound, defining for binary search, [73](#)
