

N

$n + 1$ -grams, finding, [161–163](#)

n queens completion problem, solving for chess, [210–211](#)

nan entries, filling in, [25–28](#), [30–31](#)

Navier-Stokes equations, [5](#)

nearest neighbor algorithm, TSP (traveling salesman problem), [108–110](#)

nested lists, using with decision trees, [176](#)

nested radicals, [88](#)

`next_random()` function, [93](#)

n -gram, tokenizing and getting, [159–160](#)

Norvig, Peter, [160](#)

NP (nondeterministic polynomial) complexity class, [212–213](#)

numbered file, inserting, [54](#)

numpy module

- importing, [60](#)

- using to select phrases, [162](#)

- using with decision trees, [180–181](#)

O

optimization, [101–102](#). *See also* simulated annealing; TSP (traveling salesman problem)

the outfielder problem, [1–2](#), [6–9](#). *See also* ball; Chapman's algorithm

out-of-sample observations, using with decision trees, [180](#)

overfitting decision trees, [181–182](#)

overlapping sums test, [95–96](#)

P
