

P complexity class of problems, [212–213](#)

pandas module, using in Python, [19](#)

percentile, using with decision trees, [172–173](#)

perpendicular, geometric terminology, [130](#)

perturb() function

- modifying, [116](#)

- showing end of, [121](#)

- updating, [119](#)

- using for simulated annealing, [123](#)

- using in TSP (traveling salesman problem), [111–112](#)

perturb search algorithm, [112](#). *See also* simulated annealing

phi

- compressing and communicating, [79–80](#)

- and golden ratio, [78](#)

phrase completion, [159–163](#)

plot() function, using with dots and boxes game, [187–188](#)

plot_triangle() function

- defining, [129](#)

- improving, [133–134](#)

plotitinerary() function, using in TSP (traveling salesman problem), [105](#)

plotting capabilities, Galilean model, [3](#)

.png file, saving to, [129–130](#)

points, representing, [128–130](#)

points_to_triangle() function

- defining, [128](#)

- using in triangulation, [134](#)
