

polynomial, Galilean model, [3](#)

polynomial time, verifying solutions in, [212](#)

`pop()` method

    inserting into `if` statements, [66–67](#)

    using with bits, [98](#)

`pop()` method, sorting via insertion, [55](#)

postmaster problem, [126–128](#)

potential words. *See also* words

    checking for, [153–154](#)

    finding halves of, [156–158](#)

prediction errors, decision trees, [171–172](#)

`print(cities)` function, TSP (traveling salesman problem), [103](#)

`print(lines)` function, TSP (traveling salesman problem), [104](#)

`print(square)` function, using with Kurushima’s algorithm, [24–25](#)

PRNGs (pseudorandom number generators), [92–99](#)

problems, solving with algorithms, [10–11](#)

Project Gutenberg, [160](#)

pruning decision trees, [182](#), [199](#)

pseudorandomness, [92–93](#)

Pynchon, Thomas, [3](#)

Pythagorean theorem

    using, [105](#)

    using with triangles, [130](#)

    using in TSP (traveling salesman problem), [108–109](#)

Python

    creating Luo Shu square, [22–23](#)
