

random number generators

judging PRNGs (pseudorandom number generators), [93–95](#)

LCDs (linear congruential generators), [92–93](#)

LFSRs (linear feedback shift registers), [97–99](#)

overview, [91](#)

`random.choice()` function, Python, [28](#)

randomness

Diehard tests for, [95–97](#)

possibility of, [91–92](#)

`random.seed()` function, [59](#)

recursion

of functions, [22](#)

implementing merge sort with, [69](#)

using with Euclid’s algorithm, [85](#)

`re.finditer()` function, using with words, [152](#)

`reindex()` method, using with decision trees, [181](#)

`remove()` function, using with words and spaces, [155](#)

`replace()` function, using with words and spaces, [155](#)

`resetthresh` variable, adding, [122](#)

revenue

maximum, [39](#)

showing for tax rates, [36–37](#)

`right` and `left` variables, Python, [66](#)

RPM (Russian peasant multiplication), [13–20](#)

rules, applying with Kurushima’s algorithm, [27](#), [30–31](#)
