

spaces

- getting substrings between, [153–154](#)

- inserting into texts, [158](#)

- words ending with, [156](#)

split points, choosing for decision trees, [171](#), [182](#)

splitting variables, choosing for decision trees, [182](#)

square brackets (`[]`)

- using with list comprehension, [152](#)

- using with `loc` functionality, [19](#)

square matrix, antidiagonal of, [26–27](#)

square roots, [89–91](#)

squares, filling in, [30–34](#). *See also* Japanese magic squares; magic squares

`start()` function, using with words, [153](#)

statistical methods, bootstrapping as, [91](#)

steps

- counting in insertion sort, [57–60](#), [63–64](#)

- exponential growth, [60–61](#)

stochastic gradient ascent, [45](#)

strings, splitting into words, [159–160](#)

substrings, getting between spaces, [153–154](#)

sudoku puzzles, solving, [211–212](#)

T

tangent of angle, [8–9](#)

tax rates, setting, [36–41](#)

taxation/revenue curve, gradient ascent, [41](#)
