

tax/revenue curve, flipping, [46–47](#)

temperature function, TSP (traveling salesman problem), [113–115](#)

test sets, using with decision trees, [180](#)

text normalization, using with chatbot, [203](#)

text vectorization, [204–206](#)

TFIDF (term frequency-inverse document frequency) method, [204–205](#), [207–208](#)

theta, applying to thrown ball, [8–9](#)

thinking with your neck, [6–9](#)

time, measuring precisely, [57](#)

`timeit` module, Python, [57](#)

*Titanic* lifeboat example, using sleep sort with, [71–72](#)

tokenization, performing with chatbot, [204](#)

tokenizing n-grams, [159–160](#)

training sets, using with decision trees, [180](#)

`translate()` method, using with chatbot, [203–204](#)

triage and decision trees, [166](#)

triangles

- centroid, [131–133](#)
- creating for postmaster problem, [128–134](#)
- finding circumcenter of, [131–133](#)
- plotting, [129](#), [145–146](#)
- replacing, [140–143](#)

triangulation. *See also* Bowyer-Watson algorithm; DT (Delaunay triangulation)

- defined, [134](#)
- of seven points, [135](#)
