

that there are two calls that draw *anti-aliased* lines. These are lines that include blended colors at the edges to make the lines look smooth and less jagged. There are two key advantages to using these drawing functions: they execute extremely quickly, and they allow you to draw simple shapes without having to create or load images from external files.

Table 5-2: *Functions for Drawing Shapes*

Function	Description
<code>pygame.draw.aaline()</code>	Draws an anti-aliased line
<code>pygame.draw.aalines()</code>	Draws a series of anti-aliased lines
<code>pygame.draw.arc()</code>	Draws an arc
<code>pygame.draw.circle()</code>	Draws a circle
<code>pygame.draw.ellipse()</code>	Draws an ellipse
<code>pygame.draw.line()</code>	Draws a line
<code>pygame.draw.lines()</code>	Draws a series of lines
<code>pygame.draw.polygon()</code>	Draws a polygon
<code>pygame.draw.rect()</code>	Draws a rectangle

[Figure 5-7](#) shows the output of a sample program that demonstrates calls to these primitive drawing functions.

[Listing 5-8](#) is the code of the sample program, using the same 12-step template that produced the output in [Figure 5-7](#).

File: PygameDemo5_DrawingShapes.py

```
# pygame demo 5 - drawing

--- snip ---
while True:

    # 7 - Check for and handle events
    for event in pygame.event.get():
        # Clicked the close button? Quit pygame and end the program
        if event.type == pygame.QUIT:
            pygame.quit()
            sys.exit()

    # 8 - Do any "per frame" actions
```
