

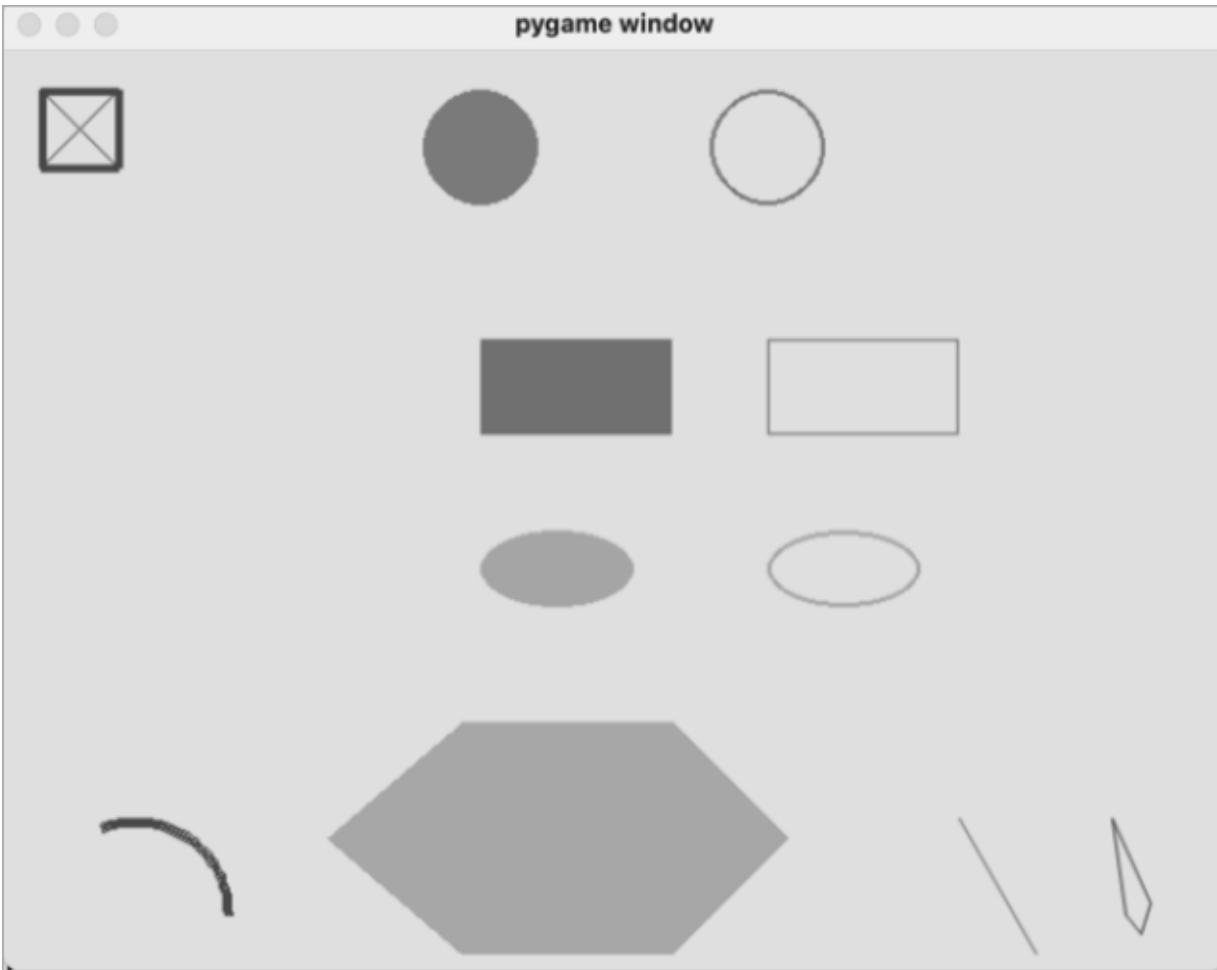

Figure 5-7: A sample program that demonstrates using calls to draw primitive shapes

Reference for Primitive Shapes

For your reference, here is the documentation for the pygame methods to draw these primitives. In all of the following, the `color` argument expects you to pass in a tuple of RGB values:

Anti-aliased line

```
pygame.draw.aaline(window, color, startpos, endpos, blend=True)
```

Draws an anti-aliased line in the window. If `blend` is `True`, the shades will be blended with existing pixel shades instead of overwriting pixels.
