

Anti-aliased lines

```
pygame.draw.aalines(window, color, closed, points, blend=True)
```

Draws a sequence of anti-aliased lines in the window. The `closed` argument is a simple Boolean; if it's `True`, a line will be drawn between the first and last points to complete the shape. The `points` argument is a list or tuple of (x, y) coordinates to be connected by line segments (there must be at least two). The Boolean `blend` argument, if set to `True`, will blend the shades with existing pixel shades instead of overwriting them.

Arc

```
pygame.draw.arc(window, color, rect, angle_start, angle_stop, width=0)
```

Draws an arc in the window. The arc will fit inside the given `rect`. The two `angle` arguments are the initial and final angles (in radians, with zero on the right). The `width` argument is the thickness to draw the outer edge.

Circle

```
pygame.draw.circle(window, color, pos, radius, width=0)
```

Draws a circle in the window. The `pos` is the center of the circle, and `radius` is the radius. The `width` argument is the thickness to draw the outer edge. If `width` is `0`, then the circle will be filled.

Ellipse

```
pygame.draw.ellipse(window, color, rect, width=0)
```

Draws an ellipse in the window. The given `rect` is the area that the ellipse will fill. The `width` argument is the thickness to draw the outer edge. If `width` is `0`, then the ellipse will be filled.
