

Line

```
pygame.draw.line(window, color, startpos, endpos, width=1)
```

Draws a line in a window. The `width` argument is the thickness of the line.

Lines

```
pygame.draw.lines(window, color, closed, points, width=1)
```

Draws a sequence of lines in the window. The `closed` argument is a simple Boolean; if it's `True`, a line will be drawn between the first and last points to complete the shape. The `points` argument is a list or tuple of (x, y) coordinates to be connected by line segments (there must be at least two). The `width` argument is the thickness of the line. Note that specifying a line width wider than 1 does not fill in the gaps between the lines. Therefore, wide lines and sharp corners won't be joined seamlessly.

Polygon

```
pygame.draw.polygon(window, color, pointslist, width=0)
```

Draws a polygon in the window. The `pointslist` specifies the vertices of the polygon. The `width` argument is the thickness to draw the outer edge. If `width` is 0, then the polygon will be filled.

Rectangle

```
pygame.draw.rect(window, color, rect, width=0)
```

Draws a rectangle in the window. The `rect` is the area of the rectangle. The `width` argument is the thickness to draw the outer edge. If `width` is 0, then the rectangle will be filled.
