

Animation

Displays a sequence of images

SpriteSheetAnimation

Displays a sequence of images from a single larger image

Setting Up

To install `pygwidgets`, open the command line and enter the following:

```
python3 -m pip install -U pip --user
python3 -m pip install -U pygwidgets --user
```

These commands download and install the latest version of `pygwidgets` from the Python Package Index (PyPI). It is placed into a folder (named *site-packages*) that is available to all your Python programs. Once installed, you can use `pygwidgets` by including the following statement at the beginning of your programs:

```
import pygwidgets
```

This imports the entire package. After importing, you can instantiate objects from its classes and call the methods of those objects.

The most current documentation of `pygwidgets` is at <https://pygwidgets.readthedocs.io/en/latest/>. If you'd like to view the source code for the package, it's available via my GitHub repository at <https://github.com/IrvKalb/pygwidgets/>.

Overall Design Approach

As shown in Chapter 5, one of the first things you do in every pygame program is to define the window of the application. The following line creates an application window and saves a reference to it in a variable named `window`:
