

either `True` or `False`. Similarly, to compare for less than, you would write a line like this:

```
if oRectangle1 < oRectangle2:
```

The `__lt__()` method then checks for the area of the first rectangle being less than the area of the second rectangle. If client code used the `>` operator to compare two rectangles, the `__gt__()` method would be called.

Main Program Using Magic Methods

[Listing 9-7](#) shows the code of the main program that tests the magic methods.

File: MagicMethods/Rectangle/Main_RectangleExample.py

```
import pygame
import sys
from pygame.locals import *
from Rectangle import *

# Set up the constants
WHITE = (255, 255, 255)
WINDOW_WIDTH = 640
WINDOW_HEIGHT = 480
FRAMES_PER_SECOND = 30
N_RECTANGLES = 10
FIRST_RECTANGLE = 'first'
SECOND_RECTANGLE = 'second'

# Set up the window
pygame.init()
window = pygame.display.set_mode((WINDOW_WIDTH, WINDOW_HEIGHT), 0, 32)
clock = pygame.time.Clock()

rectanglesList = []
for i in range(0, N_RECTANGLES):
    oRectangle = Rectangle(window)
    rectanglesList.append(oRectangle)

whichRectangle = FIRST_RECTANGLE
```
