

image that only had the numbers 0 through 14, rather than needing to fill the row to 17. The `nImages` parameter is the key to making this work.

This rest of this class has the exact same methods as the previous `SimpleAnimation` class: `play()`, `update()`, and `draw()`.

Example Main Program

[Listing 14-4](#) provides a sample main program that creates and shows a `SimpleSpriteSheetAnimation` object that shows an animated drop of water landing and spreading out. If you download everything in the *SpriteSheetAnimation* folder of this book's resources, you will get the code and the appropriate artwork.

File: SimpleSpriteSheetAnimation/Main_SimpleSpriteSheetAnimation.py

```
# Shows example of SimpleSpriteSheetAnimation object

# 1 - Import library
import pygame
from pygame.locals import *
import sys
import pygamewidgets
from SimpleSpriteSheetAnimation import *

# 2 Define constants
SCREEN_WIDTH = 640
SCREEN_HEIGHT = 480
FRAMES_PER_SECOND = 30
BGCOLOR = (0, 128, 128)

# 3 - Initialize the world
pygame.init()
window = pygame.display.set_mode([SCREEN_WIDTH, SCREEN_HEIGHT])
clock = pygame.time.Clock()

# 4 - Load assets: images(s), sound(s), etc.

# 5 - Initialize variables
❶ oWaterAnimation = SimpleSpriteSheetAnimation(window, (22, 140),
```
