

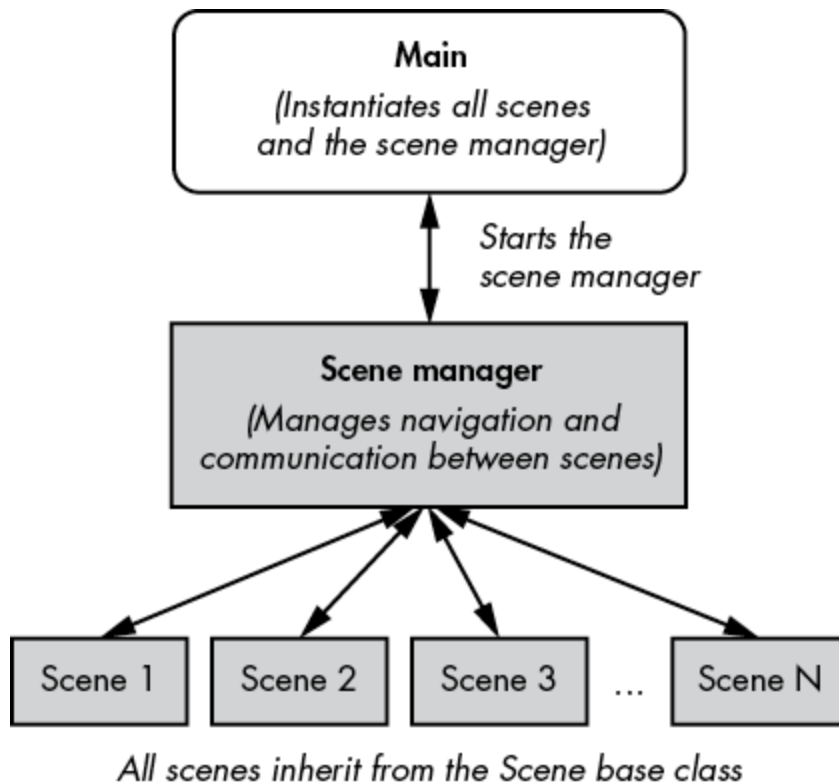

Figure 15-9: The hierarchy of objects in a project

Let's see how the different parts of a program using the scene manager work together, starting with the main program.

The Main Program

The main program will be unique for every project. Its purpose is to initialize the pygame environment, instantiate all the scenes, create an instance of the `SceneMgr`, then transfer control to the scene manager, `oSceneMgr`.

[Listing 15-2](#) presents the code of the demo main program.

File: SceneDemo/Main_SceneDemo.py

```
# Scene Demo main program with three scenes

--- snip ---
# 1 - Import packages
import pygame
❶ import pyghelpers
```
